

NUCLEAR MEDICINE SCAN REPORT

For Attention: Dr. Ladius

Name: Sebastian Matto

Age / DOB: 1948

Sex: M

File No: 187155

Clinical Summary: Excessive sweating, weight loss..T4 elevated

SCAN: THYROID SCAN

Date done: 02/09/2021

Radiopharmaceutical: I.V. ^{99m}Tc Pertechnetate 250MBq

Inj. Site: Right wrist

Technical Quality: Adequate

Thank you for your referral.

The thyroid gland is seen in its normal anatomical position. It appears normal in size with both lobes demonstrating normal homogeneous uptake with no retrosternal extension. No hot or cold nodules are noted.

TFT (elevated T4)

Thyroid uptake: 1.23 % (Normal 0.75-4%)

Conclusion:

1. Findings in keeping with normal functioning thyroid.
2. Follow up TFT in 3-6 months time is recommended. Patient can be put on propranolol for symptom relief but should not be put on antithyroid medications.

Dr. B.M. GOMBANILA. MD, MMed, FCNP (SA)

Consultant Nuclear Medicine Physician. (02/09/2021)
